

Prescribed Burning in your Neighborhood

The professionals who manage the natural areas in your community will be using prescribed fire in the near future to maintain some of those areas. The trained and experienced crews will be equipped with the latest in control equipment, plus portable radios and cellular phones to keep in touch with each other and the local Fire Department.

During the burn, we ask that you keep your pet(s) inside, and although we will make every effort to prevent drifting smoke, we recommend that you keep your windows closed. We are planning to conduct this prescribed burn between November 23rd and November 25th and between November 30 and December 4th, but it is dependent on weather conditions; therefore, the burn date may be adjusted. If you have any questions regarding this prescribed burn, please contact Kim Garske at Applied Ecological Services at (608) 897-8641. For more information on prescribed burning, please visit ...
