

Kentucky Coffee Tree

Gymnocladus Dioicus

Trees

The native Kentucky Coffee Tree is a unique shade tree that tolerates a wide variety of soil conditions and drought once established. Clusters of small, cream flowers bloom in late spring to early summer. Female trees develop large, dark brown pods that hang on the tree well into the winter. Compound, medium-green leaves turn bright yellow in the fall. This tree has sparse branching when young, but it develops into a beautiful and adaptable shade tree.

Plant Type	False
Foliage	Deciduous
Application	Specimen
Height	70'
Spread	40'-50'
Habit	Oval, irregular
Soil Type	Deep, rich, moist soil ideal
Flower	White panicles
Fruit	Red-brown pod

Blooming Period June

Spring Color Dark green

Fall Color Bright yellow

Fruit Color Red-brown pod

Fall Foliage Bright yellow
